# Fireplaces

## Natural gas fireplaces are all play and no work!

**E**veryone loves curling up in front of a cozy fireplace on a cold winter evening, but not everyone enjoys all the work it takes to build that crackling fire! If you are tired of chopping, hauling and stacking wood, not to mention cleaning ashes out of the fireplace, natural gas fireplaces are the answer!

### Convenience

Natural gas fireplaces have all the ambience and charm of a wood fireplace, without all the work. Natural gas fireplaces can be used for either decorative or heating purposes. Imagine coming home on a cold winter night, and, with the flick of a switch, having instant warmth and comfort. Gas fireplaces have on/off controls and thermostats. Many models come with remote controls for even greater convenience.

### Safety

Natural gas fireplaces are safe, too. The flame is easily controlled and produces no sparks. No burning embers, either — when you want to turn the fireplace off, it's off! No waiting around for those last embers to go out or worrying about the house filling up with smoke.

And, because natural gas is a clean-burning fuel, there is no build-up of soot or the creosote that can cause chimney fires in wood-burning fireplaces. For added safety, gas fireplaces, like all natural gas appliances, have built-in safety shut-off valves.

*Natural gas fireplaces create instant beauty and comfort in any home.*

### No chimney? No problem!

Today there is an endless variety of gas fireplaces — even ventless units and inserts that can be vented out a side wall. There are models to fit any home design or decor so you can create the fireside retreat of your dreams!

### Gas logsets

Gas logsets are the least expensive option for creating a beautiful and hassle-free fireplace. Ceramic logs are installed in an existing fireplace, using the chimney for venting.

*Fireplace inserts can be installed in existing fireplaces, providing more efficient heating.*

*Freestanding fireplaces provide warmth and comfort on a cold winter evening.*

### **Fireplace inserts**

Fireplace inserts are ideal for homeowners who like the look of traditional masonry fireplaces. Inserts are vented up the existing chimney and provide more efficient heating. Inserts can also be equipped with blowers to circulate heat.

### **Direct vent gas fireplaces**

Direct vent gas fireplaces are complete units with gas logs that are vented directly through a wall, eliminating the need to build an expensive chimney. The fireplaces can be equipped with a fan to circulate heat and offer greater design flexibility with installations up to 10 feet away from an outside wall.

### **Ventless fireplaces**

Ventless units can be installed almost anywhere for a dramatic effect. The units do not require a chimney or flue, and are equipped with oxygen depletion sensors (ODS) for added safety.

### **Freestanding fireplaces**

Freestanding or stand-alone gas fireplaces come in many styles, including fireplace stoves, or hearth and wall mount units. These self-contained units often produce radiant heat and can be equipped with blowers. Freestanding fireplaces can be vented with either horizontal or vertical vents.

## **Start enjoying your fireplace!**

Yankee Gas can help you determine the best options and sources for your natural gas fireplace needs. We have information about financing programs for converting to natural gas or adding new natural gas appliances. Our sales representatives can answer all your questions. Call **1-888-2-Yankee**.
